

# **TerrSet liberaGIS Installation**

The TerrSet liberaGIS is being distributed as freeware and does not require the installation of a license file.

TerrSet liberaGIS can be installed on the same computer as a previous version of TerrSet, if desired, but only one of these can be open at a time. We recommend uninstalling previously installed versions of TerrSet to avoid confusion.

You should be logged onto the computer as a user with admin rights in order to run the installation successfully. Download the setup file, then right-click on it and choose Run As Administrator. Follow the prompts.

## **Multi-Seat License Installation and Activation**

### **Server**

TerrSet must be installed on each of the clients. No license file or connection to the server is needed to install or run TerrSet on the clients.
